

EASY SETUP INSTRUCTIONS

So there are really only 5 steps you need to do to set these campaigns up, and we're going to walk you through each of these steps.

Step 1: Get Your Affiliate Links

The first thing you need to do is get your affiliate links for the offers you will be promoting.

So open up the file called "Offer.txt", and open up the link in that file.

You will need to create a WarriorPlus account for this, if you don't already have one.

Once you're logged in, just click on the "Request Approval" button.

You must be approved by jasonwebmedia to promote this offer.

Request Approval

These requests are manually approved by the owners of the products, so they can take a couple of hours or a couple of days to approve. Normally they are quite fast though.

Once you are approved, you will have your affiliate links ready to go:

Your affiliate link is: <https://warriorplus.com/o2/a/lt6md/0>

Step 2: Create Your List

First you need to create a list in your autoresponder service.

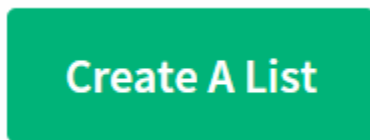

Obviously there are a lot of different providers you can use, and how you create a list depends on which service you use.

For the purposes of illustration, we'll be using Aweber as it is one of the most widely used platforms, but you are of course welcome to use any autoresponder service you want.

So within Aweber, to create a list you need to click on "Manage Lists" on the top menu:

Then click on "Create A List":

Then on the next page just enter your details:

Your Company Name

Your Company Website

Sender Name

Sender Email

Click on “Next Step”, then on the next page enter the details for your list:

List Name

Your List Name

Briefly describe the emails your subscribers are going to receive.

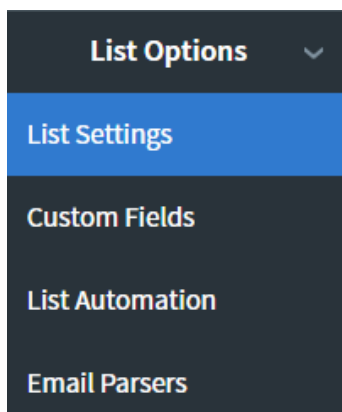

List Description 27/400

Information about your list

Your subscribers will see this description. [Where?](#)

Click on “Next Step” again, and then just click on “Approve Message & Create List”.

Once the list has been created, go to “List Options” and click on “List Settings”:

Then click on “Confirmation Message”:

Confirmation Message

Update the message and settings.

Here you want to set any “confirmations” to OFF, so you are setting your list as single opt-in:

Confirmation message settings

While we strongly recommend leaving confirmed opt-in *on* for deliverability reasons, you can disable it for imports or sign up forms on your website. Please [contact Customer Solutions](#) if you're using an API integration. [Learn more](#)

Send confirmation message for AWeber sign up forms

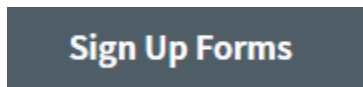

Send a confirmation message for subscriber imports

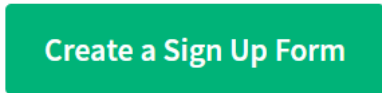

Then click “Save Settings”.

Step 3: Create Your Form

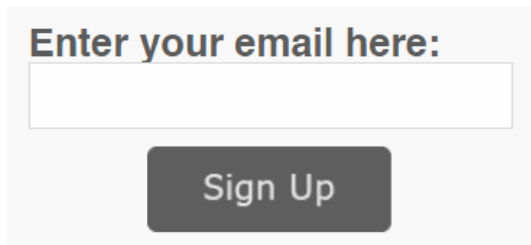

Next you need to create your signup form. So click on “Sign Up Forms”:

Then click on “Create a Sign Up Form”:

Now here is where you can actually create your signup form. You can use any style you like, but usually a simple, clean design works best. Anything like this is fine:

Just make sure the background is transparent and has no actual background color or image. In Aweber you do this by selecting “Body”, and changing the background color to the transparent icon:

Then click on “Go To Step 2”:

On the next page, just give your form a name, and then select “Custom Page” under the “Thank You Page” section:

Form Name*:
My Web Form 2

Thank You Page:

Basic Version
Simple Page Customized With Your Logo

Custom Page
Use Your Own URL

Stay on Current Page
Subscriber does not see a thank you page

Already Subscribed Page:
Basic Version

Preview

Here you need to enter your affiliate link, so that once someone subscribes to your list, they are redirected to your affiliate offer.

Thank You Page:
Custom Page

<http://youraffiliatelink.com>

Open this in a new window

Then save your form, and click “Go To Step 3”.

On the next page you need to copy the form code:

 **I Will Install My Form**
You are comfortable with HTML and have access to edit your pages

Javascript Snippet
The Quick and Easy Version

Raw HTML Version
Advanced Design Customization

Recommended

- If you change your form here, you won't have to update your website.
- Track statistics in your account.

You can paste the snippet below anywhere between the body tags of your website:

```
<div class="AW-Form-407981509"></div>
<script type="text/javascript">(function(d, s, id) {
  var js, fjs = d.getElementsByTagName(s)[0];
  if (d.getElementById(id)) return;
  js = d.createElement(s); js.id = id;
  js.src = "//forms.aweber.com/form/00/407981509.js";
```

Then open up the landing page you want to use (open it in a text editor or html editor), and paste the code as shown here:

```
<!-- Enter your signup form code below-->
```

```
<div class="AW-Form-407981509"></div>
<script type="text/javascript">(function(d, s, id) {
  var js, fjs = d.getElementsByTagName(s)[0];
  if (d.getElementById(id)) return;
  js = d.createElement(s); js.id = id;
  js.src = "//forms.aweber.com/form/09/407981509.js";
  fjs.parentNode.insertBefore(js, fjs);
})(document, "script", "aweber-wjs-24hi96j89");
</script>
```

```
<!-- Enter your signup form code above-->
```

Then save your landing page.

Step 4: Uploading Your Landing Page

Now you need to upload your landing page to your hosting servers.

The easiest way to do this is via FTP. So you need to have your FTP logins ready, and use a program like FileZilla.

You can download FileZilla from here:

<https://filezilla-project.org/>

Then just follow the instructions to download and install the program.

You will then need to login to your hosting CPanel to create an FTP account. To do this, once you login to your hosting CPanel, click on “FTP Accounts”:

Then enter the details you want for the FTP account, and click “Create FTP Account”.

Add FTP Account

Log In

Domain

Password

Password (Again)

Strength ⓘ

Very Weak (0/100)

Password Generator

Directory

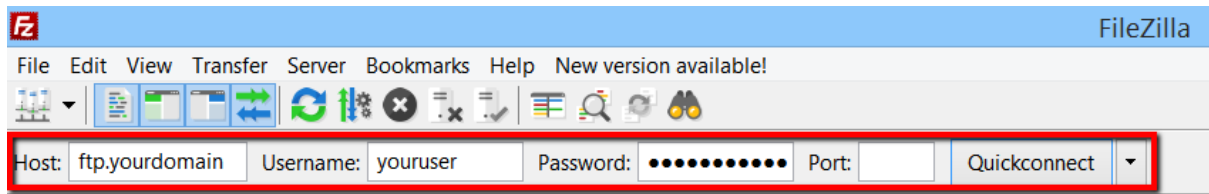

Quota

2000 MB

Unlimited

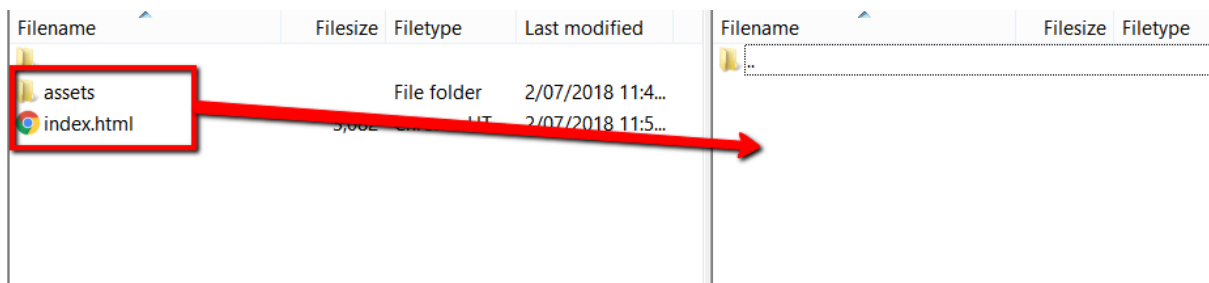

Create FTP Account

Once you've done that, open up FileZilla, and enter the logins you just created and click on "Quickconnect":

Then on the left panel, find the files for the landing page. On the right panel, you need to find the location of the directory where you want to upload your landing page.

Then just drag all the files from the left panel into the right panel:

Step 5: Uploading Your Emails

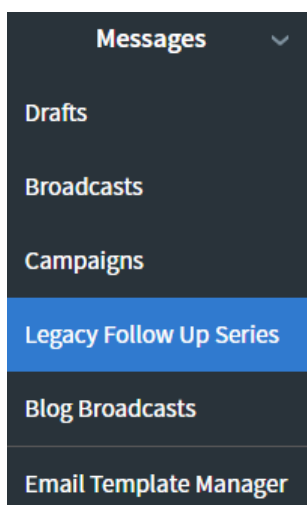

The last thing you need to do is upload your emails into your autoresponder service.

First open up the “swipes” file, and enter your name and affiliate link into the designated areas:

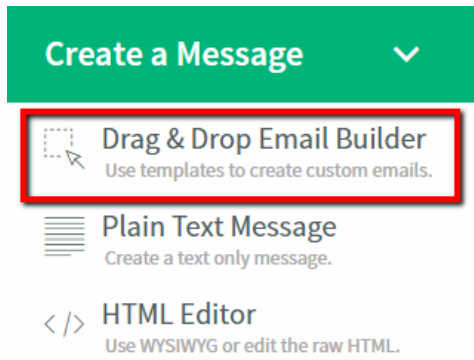

```
20 Teasing his best case studies...
21
22 I have been wondering...
23
24 WTF is he even doing??
25
26 And now I know...
27
28 This is WTF he's been doing over
29 the last 1.5 months...
30
31 Very interesting.
32
33 Definitely worth a look!
34
35 [Link]
36
37 See for yourself,
38
39 [Your Name]
40
```

Then save the file.

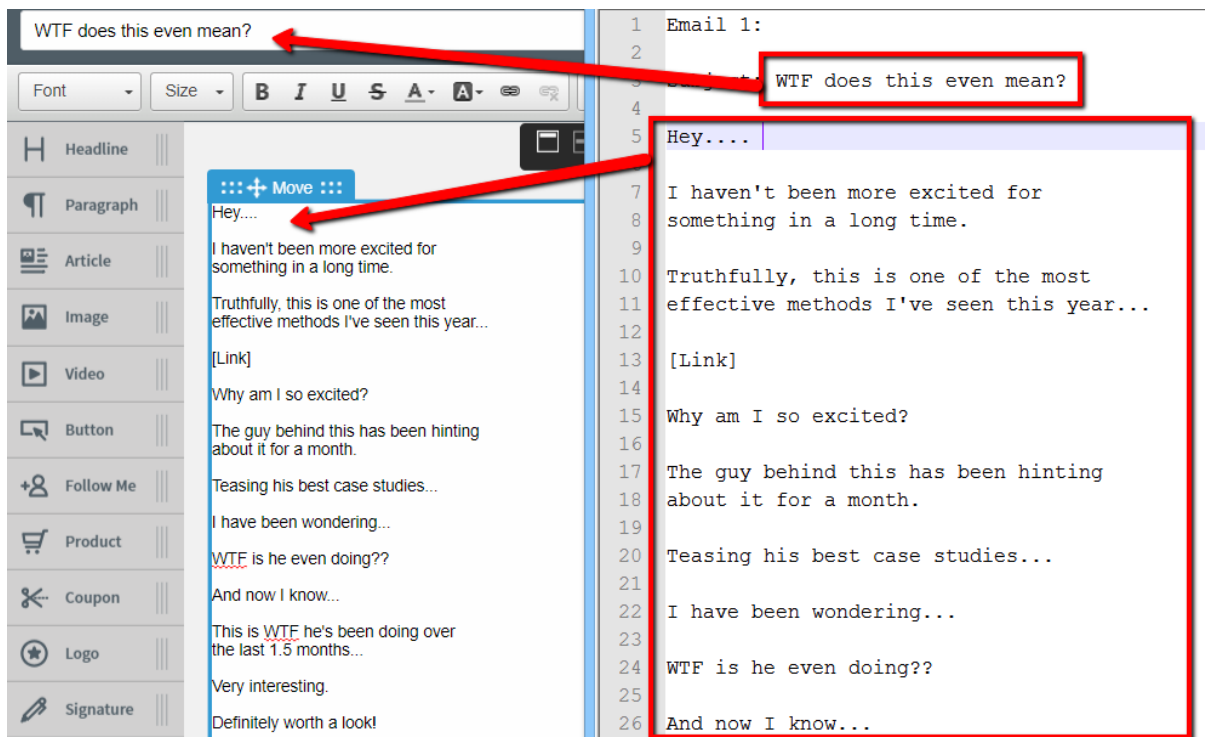

Next login to your autoresponder service, and create a new autoresponder. Again, this is going to be different for each service you use, but within Aweber you first select your list, then hover over “Messages” and then click on “Legacy Follow Up Series”:

Then on the next page click on “Create a Message”, and click on “Drag & Drop Email Builder”:

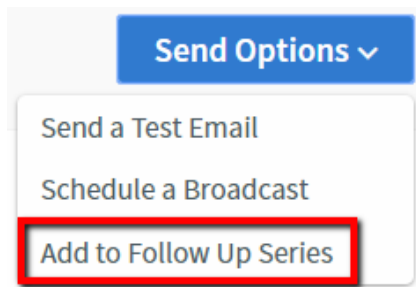

Then just copy the email from the file, and paste it into the text field. Also make sure to copy and paste the subject line as well:

Then click “Save & Exit”:

On the next page, click on “Send Options” and then on “Add to Follow Up Series”:

Next you want to set the interval to 1 day, so make sure you put “1” day(s) after previous:

Interval

Follow Up # 2 sent day(s) after previous

Then click “Add to Follow Up Series”:

Do the same for all the other emails, and make sure they are set to be sent 1 day apart, except for the first email. Make sure the first email is sent immediately.
